SUMMARY

Results-driven AWS DevOps Engineer with 3.11 years of experience in designing, implementing, automating, and managing highly scalable, secure, and reliable cloud infrastructure and CI/CD pipelines. Strong expertise in AWS Cloud services, Kubernetes, Docker, Jenkins, Terraform, and Ansible with hands-on experience in infrastructure automation, container orchestration, deployment automation, monitoring, and DevOps best practices.

Proficient in building enterprise-grade cloud environments, automating software delivery pipelines, managing Kubernetes workloads on Amazon EKS, and implementing Infrastructure as Code (IaC) solutions using Terraform. Experienced in collaborating with cross-functional teams in Agile environments to improve deployment efficiency, system reliability, scalability, and operational excellence.

SKILLS

Cloud Platforms	:	AWS, EC2, VPC, IAM, S3, EKS, ECR, RDS, Route53, CloudWatch, CloudTrail, SNS, Auto Scaling, ALB, Lambda, CloudFront, SNS, Secrets Manager
DevOps & CI/CD Tools	:	Jenkins, Git, GitHub, Maven, Nexus, SonarQube, Jira
Containerization & Orchestration	:	Docker, Kubernetes, Amazon EKS
Infrastructure as Code & Automation	:	Terraform, Ansible, CloudFormation
Monitoring & Logging	:	Prometheus, Grafana, CloudWatch
Security & Quality Tools	:	SonarQube, IAM
Scripting Languages	:	Bash, Python, Shell Scripting
Databases	:	MySQL, PostgreSQL, DynamoDB, AWS RDS
Operating Systems	:	Linux (Ubuntu, Amazon Linux)
Version Control & Collaboration	:	Git, GitHub, GitLab, Jira, Confluence
Build & Artifact Management	:	Maven, Nexus Repository Manager

EXPERIENCE

- Working as Aws DevOps Engineer with Yokra Technology Solutions Pvt Ltd from Feb 2025 to till date.
- Worked as Software Engineer with Krify Software Technologies Pvt Ltd company from Sep 2022 to Jan 2025.

PROJECTS HANDLED

Project-2: Lloyds Bank HBOS Integration Project
Yokra Technology Solutions Pvt Ltd — Chennai, India
Client: Lloyds Banking Group, UK
Project Description:

Feb 2025 – Present

The HBOS Integration Project was enhanced for Lloyds Banking Group to support the integration and modernization of banking applications and infrastructure. The project focused on cloud infrastructure management, CI/CD automation, containerization, and Kubernetes deployments using AWS and DevOps tools. Terraform, Jenkins, Docker, Ansible, Kubernetes, Prometheus, and Grafana were used to automate deployments, improve system reliability, and reduce manual operational efforts.

Responsibilities:

- Architected and managed highly-available AWS infrastructure (EC2, VPC, IAM, S3, RDS, EKS, Route53, ALB) supporting **12+ applications** with **99.9% uptime**.
- Built and maintained Jenkins CI/CD pipelines integrated with GitHub, reducing deployment time from **4 hrs to 45 mins**.
- Automated provisioning of AWS resources using Terraform with remote state (S3 + DynamoDB locking), cutting manual provisioning effort by **70%**.
- Wrote Ansible playbooks automating deployment, patching, and configuration across **30+ servers**, reducing manual config time by **60%**.
- Containerized applications using Docker and deployed microservices to Kubernetes clusters.
- Engineered Kubernetes YAML manifests for Deployments, Services, ConfigMaps, Secrets, and Ingress resources.
- Implemented Prometheus/Grafana monitoring with custom dashboards and alert rules, cutting incident detection time from **30 mins to 5 mins**.
- Implemented centralized logging using ELK Stack and CloudWatch Logs.
- Administered **3-4**-node EKS clusters (RBAC, namespace isolation, HPA scaling) supporting **8-10 microservices** in production.
- Worked in Agile/Scrum environments supporting production deployments and incident management.
- Conducted root cause analysis and performance tuning for production systems.

Project-1: Zurich Life and Pensions System

Sep 2022 – Jan 2025

Krify Software Technologies Pvt Ltd — Kakinada, India

Client: Zurich Insurance Group, Switzerland

Project Description:

The Zurich Life and Pensions System is an insurance application improved for Zurich Insurance Group to manage customer insurance policies, pension services, and financial operations. The project focused on automating cloud infrastructure, application deployments, and monitoring using AWS and DevOps tools. Applications were deployed on Kubernetes (EKS) with CI/CD pipelines executed using Jenkins, Docker, Terraform, and Ansible to ensure secure, scalable, and zero-downtime deployments.

Responsibilities:

- Designed and directed scalable AWS infrastructure using Terraform across EC2, EKS, VPC, IAM, S3, RDS, Route53, ALB, Auto Scaling, and CloudWatch.
- Built and maintained CI/CD pipelines using Jenkins integrated with GitHub for streamlined build, testing, and deployments.
- Containerized applications using Docker and administered Docker image repositories in Amazon ECR.
- Deployed and oversaw applications on Kubernetes and Amazon EKS using Deployments, Services, Ingress, ConfigMaps, Secrets, and HPA.
- Optimized server provisioning and configuration management using Ansible playbooks.
- Deployed end-to-end deployment workflows integrating GitHub, Jenkins, Docker, Terraform, Ansible, and Kubernetes.
- Organized rolling updates, blue-green deployments, and canary deployments to ensure zero downtime releases.
- Monitored infrastructure and application performance using Prometheus, Grafana, and CloudWatch.
- Applied IAM policies, secrets management, vulnerability scanning, and security best practices.
- Collaborated with development and QA teams to troubleshoot production issues and optimize release cycles.

EDUCATION

BACHELOR OF TECHNOLOGY – JNTUK University 2022
